Convolution is the treatment of a matrix by another one which is called "kernel".

Introduction to Convolutional Neural Networks

Por Jianxin Wu (2017)

$$\frac{\partial z}{\partial (\text{vec}(\boldsymbol{y})^T)} (F^T \otimes I) = \left((F \otimes I) \frac{\partial z}{\partial \text{vec}(\boldsymbol{y})} \right)^T$$

$$= \left((F \otimes I) \text{vec} \left(\frac{\partial z}{\partial Y} \right) \right)^T$$

$$= \text{vec} \left(I \frac{\partial z}{\partial Y} F^T \right)^T$$

$$= \text{vec} \left(\frac{\partial z}{\partial Y} F^T \right)^T,$$
